HERE'S A TIP on a safe and easy way to remove calcium carbonate glaze from your rollers:

Wash all ink from the rollers with **CMC122** followed with **CMC123**. Disengage the clean-up attachment and pour **CMC111** deglazer over the rollers. Let the press run for five to ten minutes, adding more of the **CMC111** as needed. Engage the clean-up attachment to remove all of the **CMC111**.

Remember: the amount of **CMC111** needed will depend on the amount of alkaline build-up. The alkaline will neutralize the **CMC111** as the calcium carbonate is dissolved.
